```
library(ggplot2)
```

Ch 3 - Data Visualization

R for Data Science - Ch 3

ggplot creates the coordinate system w/ the first argument, which tells ggplot what data you are using

- add layers with subsequent arguments (i.e. `geom_point`)

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy), color = 'red', size = 2)
```

This is the ggplot skeleton: `ggplot(data =) + (mapping = aes())`

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = class, y = drv))
```

```
ggplot(data = mpg) +  
geom_point(mapping = aes(x = hwy, y = cyl))
```
